

Edward (Soon Hyun) Hwang

Graduate IT & Software Engineering | Systems | DevOps | Backend | Data

Sydney, NSW | edwardhwang1223@gmail.com | +61 413 220 552 | linkedin.com/in/soon-hyun-hwang-7212a42b7 | github.com/EdwardH-jedi

SUMMARY

Final-year Bachelor of Advanced Computing (Computer Science) student at the University of Sydney with practical experience across software development, systems integration, DevOps tooling, IoT infrastructure, and data pipelines. Fluent English speaker, educated and working entirely in English throughout university and professional settings in Australia. Comfortable working across the full IT stack — from embedded hardware and backend services to containerised deployments and SQL databases. Proven ability to deliver in fast-paced, cross-cultural environments (including international on-site deployment). Seeking a graduate IT or software engineering role where strong technical foundations and a collaborative mindset can create immediate impact.

EXPERIENCE

Computer Vision & Field Deployment Intern — Sensorway (Enterprise IoT vendor — clients include Samsung, SK Hynix, Republic of Korea Army)

Dec 2025 – Feb 2026 | On-site: Ecopro, Hungary

- Contributed to enterprise-grade IoT projects at a company whose client portfolio includes Samsung, SK Hynix, and the Republic of Korea Army — gaining exposure to production systems operating at high-reliability, industrial scale.
- Deployed and configured smart-sensor infrastructure (~750 sensors) across an industrial site, integrating PID middleware, SQL databases, Docker containers, and a real-time monitoring UI — gaining direct exposure to systems integration and IT infrastructure at scale.
- Validated end-to-end data pipelines from physical sensors through middleware and relational database layers, ensuring system observability and data integrity during live rollout.
- Supported a computer-vision-based anomaly (flash-attack) detection initiative through iterative video validation and test-case refinement, improving detection reliability.
- Triage REST API defects by reproducing issues in controlled environments, documenting edge cases, and coordinating hotfixes with backend developers — applying structured debugging and QA practices.
- Worked within a Linux-based server environment, using CLI tools and Docker for container management and system monitoring tasks.

Research Lab Intern (Materials Science & Engineering) — Seoul National University

Jun 2021 – Aug 2021 | Seoul, South Korea

- Acquired fundamentals of research workflow: data collection, analysis, and collaborative decision-making in a lab environment.
- Applied structured research practices to complete a capstone project ahead of schedule, demonstrating adaptability and self-direction.

EDUCATION

Bachelor of Advanced Computing (Computer Science)

University of Sydney | Aug 2022 – Present (Expected 2026)

- Relevant coursework: Algorithms & Data Structures, Database Systems, Software Engineering, Operating Systems, Computer Networks, Artificial Intelligence, Object-Oriented Programming.
- Capstone and project work spanning systems design, backend development, and data modelling.

High School Diploma

St Johnsbury Academy Jeju | Oct 2017 – Jun 2022

PROJECTS

Contactless Coffee Machine — Embedded Systems Project — High School Capstone

2021 – 2022

- Designed and implemented a hardware-software integrated system using Arduino (C), combining motion and ultrasonic distance sensors for touchless gesture detection — applying embedded programming, sensor interfacing, and real-time control logic.
- Delivered a working prototype that demonstrated full system integration from sensor input to actuator output, earning strong peer and faculty recognition.

Ara Company — Tech Startup (CEO & Co-founder) — Samsung Enterprise Competition

2020 – 2022

- Co-founded a tech startup through the Samsung Enterprise startup support program, leading product conceptualisation, team coordination, and a patent application.
- Won Grand Prize at the Samsung Enterprise Competition, competing against teams from across South Korea.

TECHNICAL SKILLS

Languages:	Python, Java, SQL, C++, Bash / Shell Scripting
Backend & APIs:	REST API integration, API debugging & QA, middleware configuration
Databases:	SQL (relational), database design, data pipeline validation
DevOps & Infra:	Docker (containerisation), Linux CLI, Git, CI/CD concepts, system monitoring
Systems & IoT:	Embedded systems (Arduino/C), sensor integration, PID middleware, industrial IoT
Networking:	TCP/IP fundamentals, system integration, end-to-end data flow validation
Other:	Agile/collaborative workflows, technical documentation, cross-functional coordination

LANGUAGES

English (Fluent — university-educated and professionally working in Australia) Korean (Native) Spanish (DELE A2)

AWARDS & RECOGNITION

2020 Samsung Enterprise Competition (Startup Support Program) — **Grand Prize**

2019 Prudential Voluntary Work Competition (Korean High School) — Bronze Prize

2019–2022 Jeju Provincial Park President's Commendation Award

2019–2022 Korea Youth Volunteer Federation Commendation

ACTIVITIES & LEADERSHIP

2019–2022 Gotjawal Provincial Park Volunteer Club — social media advertising and environmental management

2019–present Community Service Organisation — founding member, monthly local outreach programs

2019 Better World (Frontier) — International business camp, USA

2018 VANK Cyber Ambassador — global digital diplomacy and communications
